## Read all metadata

We have more than 1.3 millions documents

```
[5]: %%time
with open(pkl_file, "rb") as pk:
    all_metadata = pickle.load(pk)
print(f"There are {len(all_metadata):,d} documents, total size is {total_size(all_metadata) / mb} MB")
```

```
There are 1,360,527 documents, total size is 3581.0042362213135 MB
CPU times: user 1min 17s, sys: 4.06 s, total: 1min 21s
Wall time: 1min 21s
```

## Convert to dataframe

Generate list of tuples docID/metadata name/metadata value

```
[6]: %%time
DocMeta = namedtuple('DocMeta', ["doc_id", "metadata_name", "metadata_value"])
list_tuples = []
for doc in all_metadata:
    for m, v in doc["metadata"].items():
        list_tuples.append(DocMeta._make((doc["GUID"], m, v)))
```

```
CPU times: user 42.8 s, sys: 1.94 s, total: 44.7 s
Wall time: 44.7 s
```

Create

- dataframe from list of tuples
- cast every metadata value to strings
- create metadata name/value pair for one-hot encoding

```
[7]: %%time

metadata_df = pd.DataFrame.from_records(list_tuples, columns=DocMeta._fields)
metadata_df["metadata_value"] = metadata_df["metadata_value"].astype(str)
metadata_df["full_metadata"] = metadata_df["metadata_name"].str.cat(metadata_df["metadata_value"], sep="__")
print(f"There are {len(metadata_df):,d} doc/metadata pairs")
metadata_df.head()
```

```
There are 24,064,266 doc/metadata pairs
CPU times: user 17.4 s, sys: 3.75 s, total: 21.2 s
Wall time: 21.1 s
```

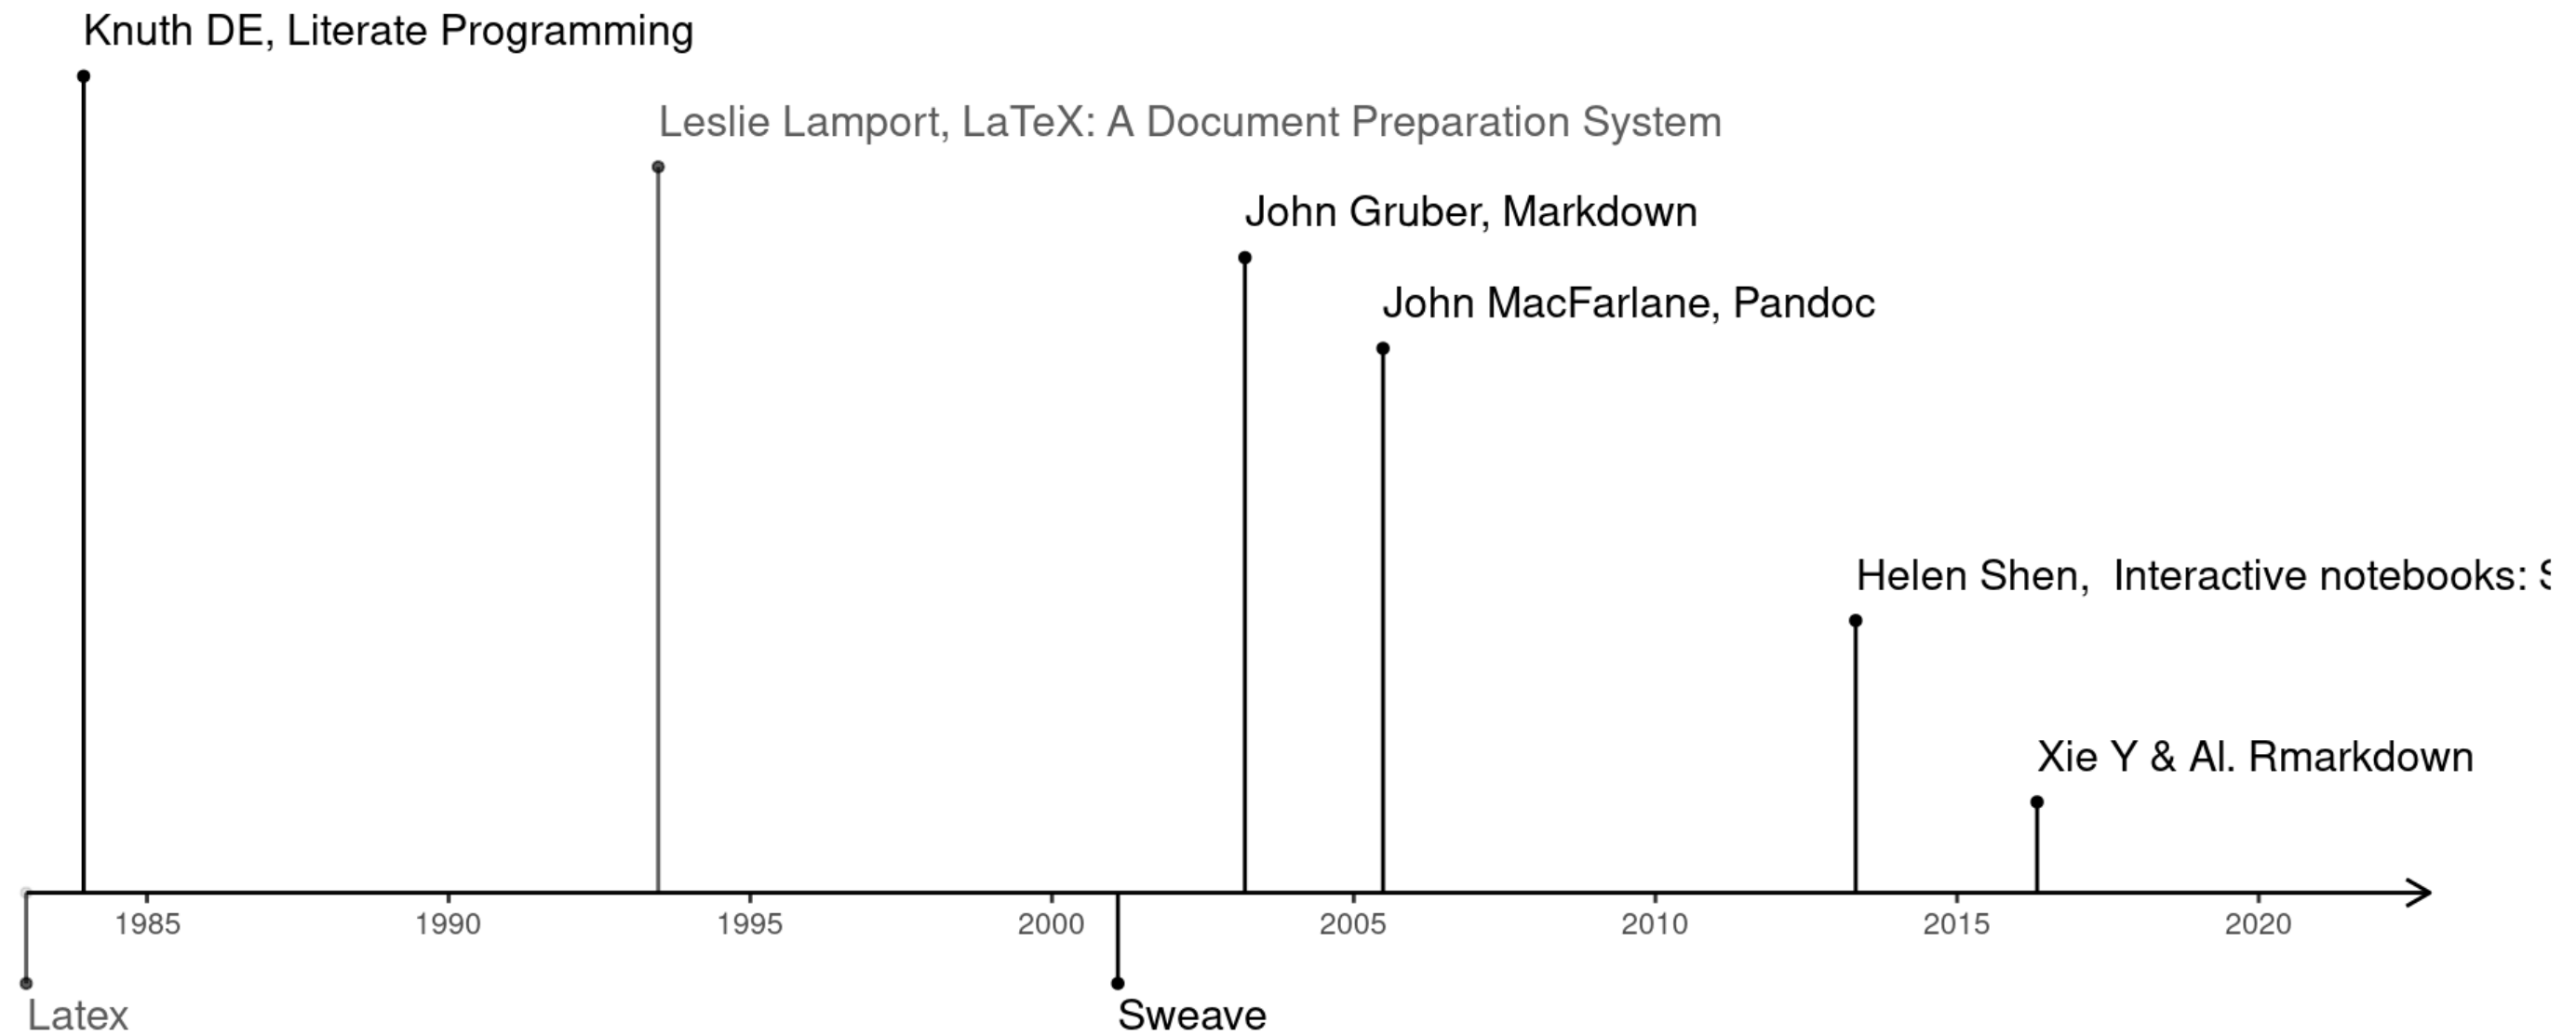

```
[7]:
```

	doc_id	metadata_name	metadata_value	full_metadata
0	4f9c3397-691d-3122-bcc0-463d81a2a05c	Content-Encoding	windows-1252	Content-Encoding__windows-1252
1	4f9c3397-691d-3122-bcc0-463d81a2a05c	Content-Length	16896	Content-Length__16896

# The R Markdown ecosystem

# Quarto: Next generation R Markdown

# Quarto highlights

 Consistent implementation of attractive and handy features across outputs: tabsets, code-folding, syntax highlighting, etc.

 Guardrails, particularly helpful for new learners: YAML completion, informative syntax errors, etc.

 More accessible defaults as well as better support for accessibility

 Support for other languages like Python, Julia, Observable, and more via Jupyter engine for executable code chunks.

RStudio

Teach

# Quarto flattens the learning curve

# Quarto can grow with learners in a profound way

[camembr.quarto.pub/hello-  
quarto](https://camembr.quarto.pub/hello-quarto)

# LA TECHNIQUE

# Installer

Suivre les [instructions](#) de [Quarto.org](#).

## Remarque

Nécessaire d'avoir une certaine version de l'IDE RStudio (v2022.07).

1. Installer Quarto CLI
2. Installer le package éponyme `quarto`

Quarto peut s'utiliser en dehors de tout IDE, directement en ligne de commande

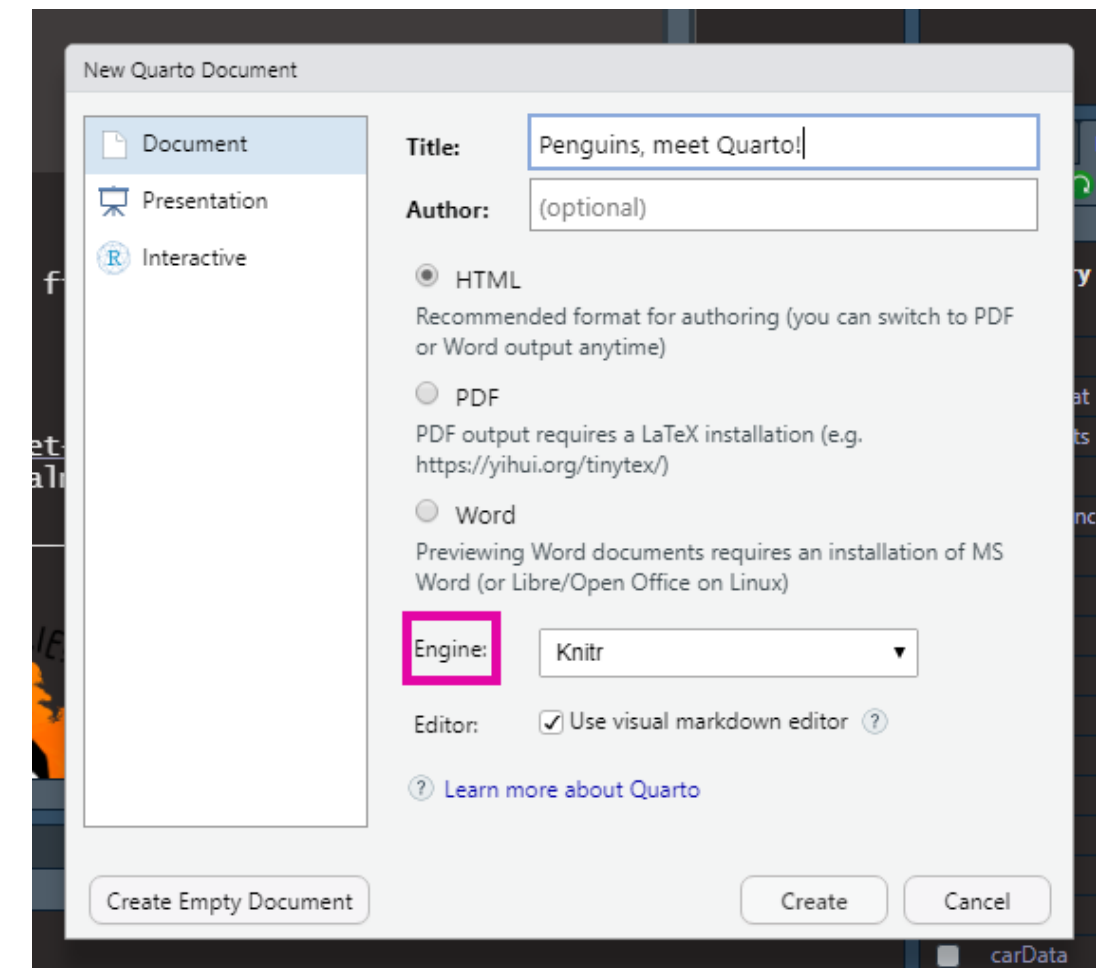

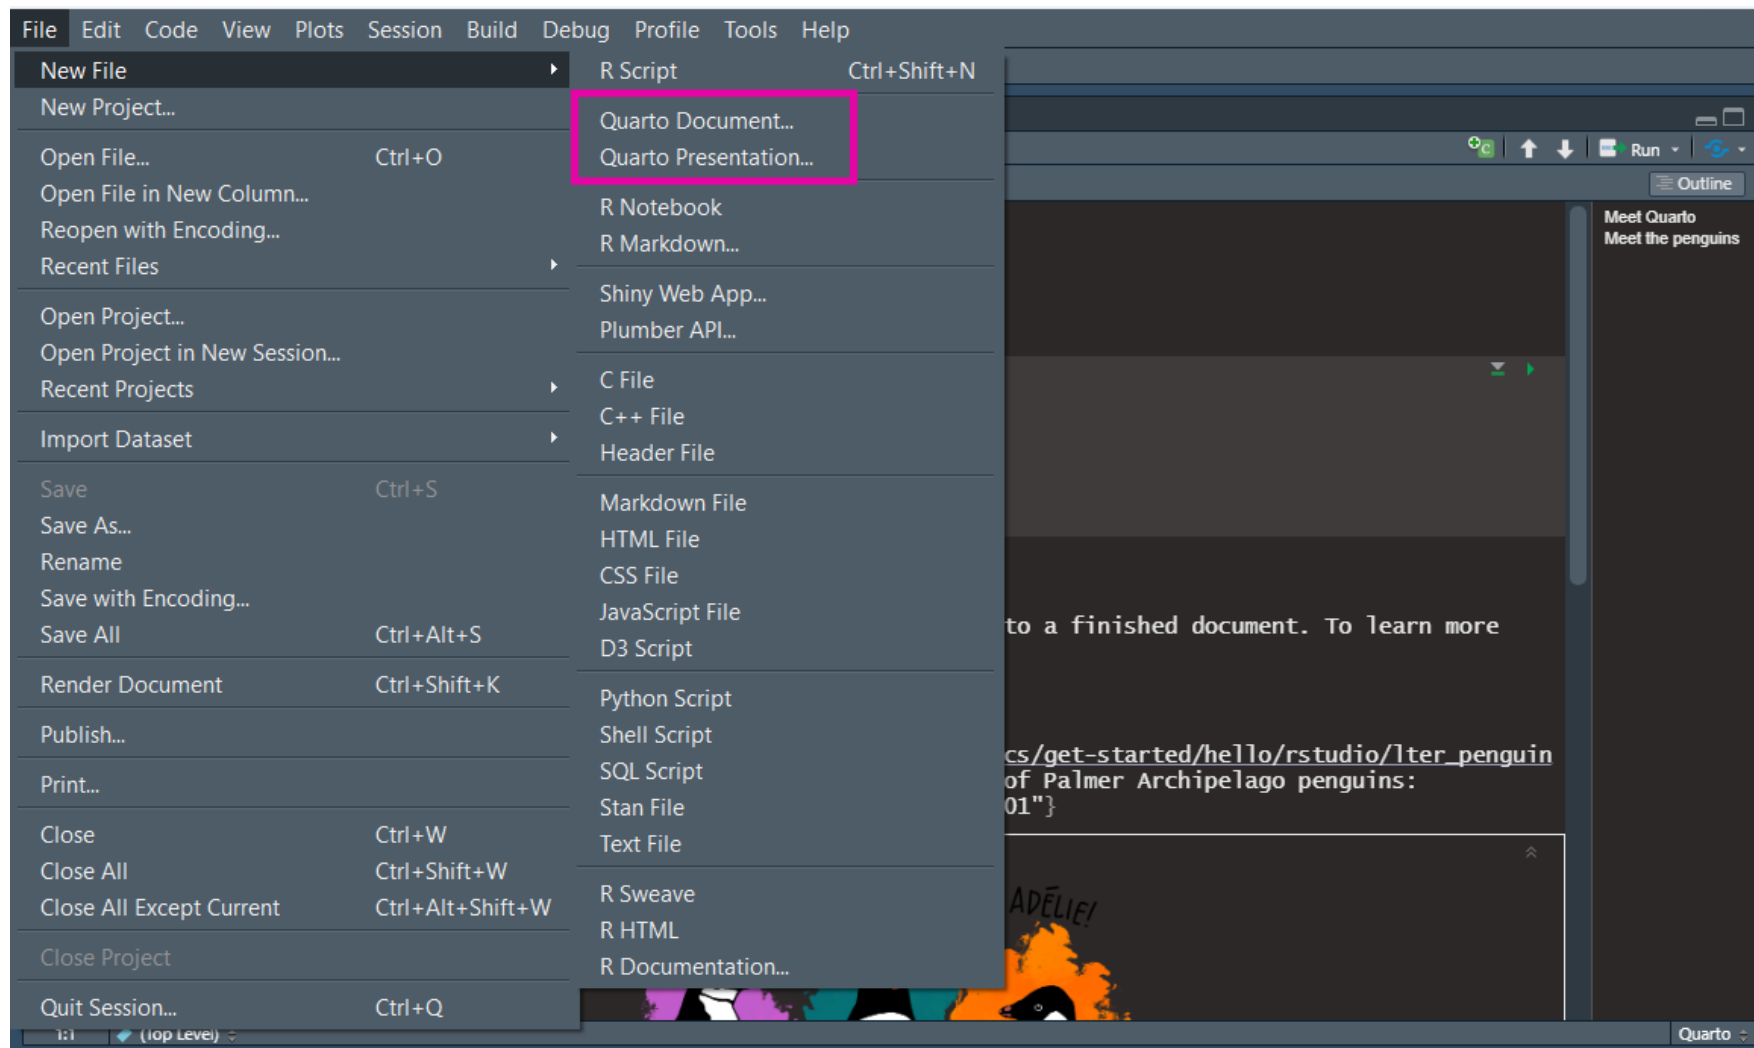

# Créer un notebook

Une fois l'installation faite, comment lancer Quarto?

RStudio

Jupyter

Des formats de fichiers spéciaux proposés dans **File**: une nouvelle extension, **.qmd**

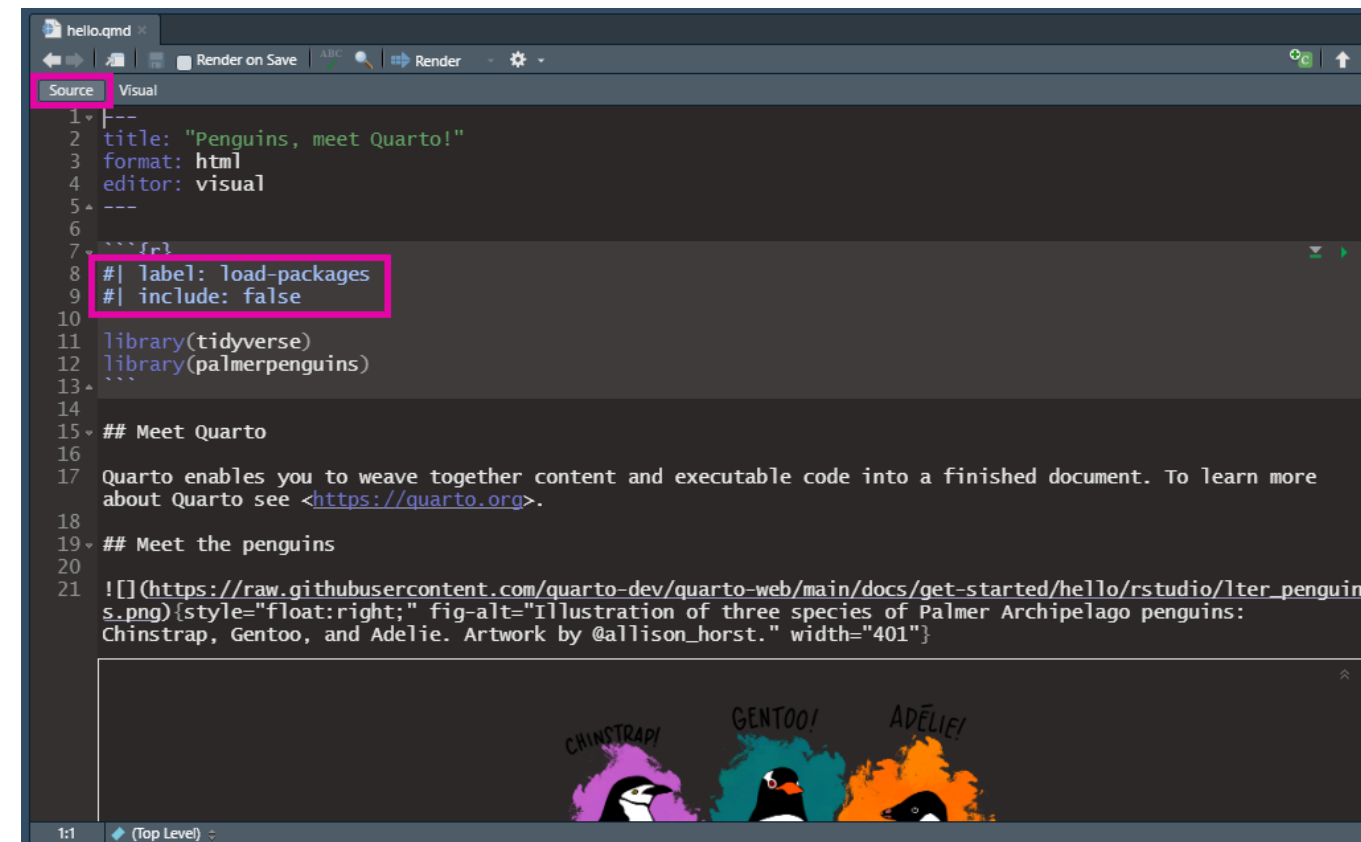

# Créer un notebook

Une fois l'installation faite, comment lancer Quarto?

RStudio

Jupyter

Un bouton **Render** au lieu de **Knitr** pour générer le document

```
1 |---
2 | title: "Penguins, meet Quarto!"
3 | format: html
4 | editor: visual
5 | ---
6 |
7 | ```{r}
8 | #| label: load-packages
9 | #| include: false
10 |
11 | library(tidyverse)
12 | library(palmerpenguins)
13 | ```
14 |
15 | ## Meet Quarto
16 |
17 | Quarto enables you to weave together content and executable code into a finished document. To learn more
18 | about Quarto see <https://quarto.org>.
19 |
20 | ## Meet the penguins
21 | {style="float:right;" fig-alt="Illustration of three species of Palmer Archipelago penguins:
23 | Chinstrap, Gentoo, and Adélie. Artwork by @allison_horst." width="401"}
```

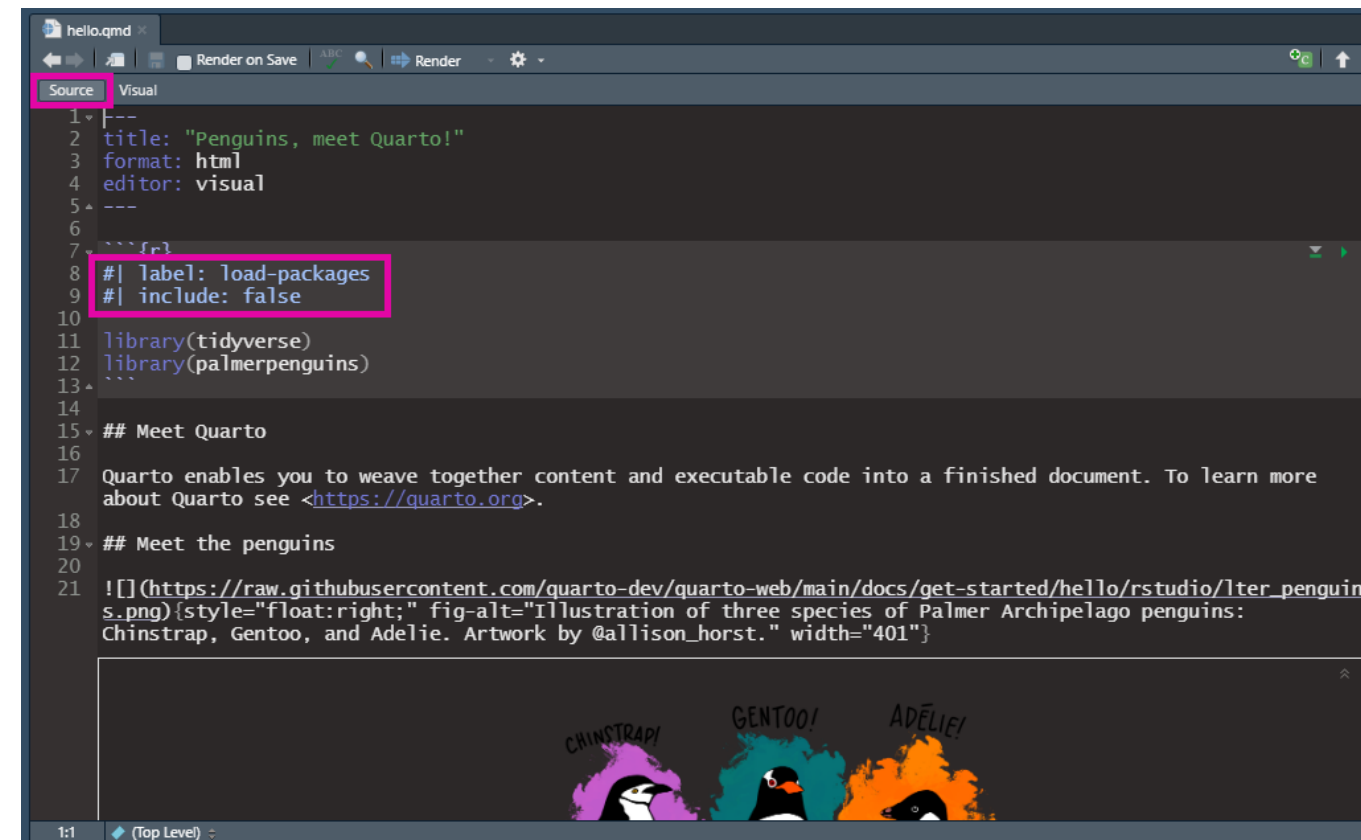

# Créer un notebook

Une fois l'installation faite, comment lancer Quarto?

RStudio

Jupyter

Une autre manière de spécifier les “chunk options” (pipe natif #|)

```
1 |---
2 |title: "Penguins, meet Quarto!"
3 |format: html
4 |editor: visual
5 |---
6 |
7 |```r
8 |#| label: load-packages
9 |#| include: false
10 |
11 |library(tidyverse)
12 |library(palmerpenguins)
13 |```
14 |
15 |## Meet Quarto
16 |
17 |Quarto enables you to weave together content and executable code into a finished document. To learn more
18 |about Quarto see <https://quarto.org>.
19 |
20 |## Meet the penguins
21 |{style="float:right;" fig-alt="Illustration of three species of Palmer Archipelago penguins:
Chinstrap, Gentoo, and Adélie. Artwork by @allison_horst." width="401"}
```

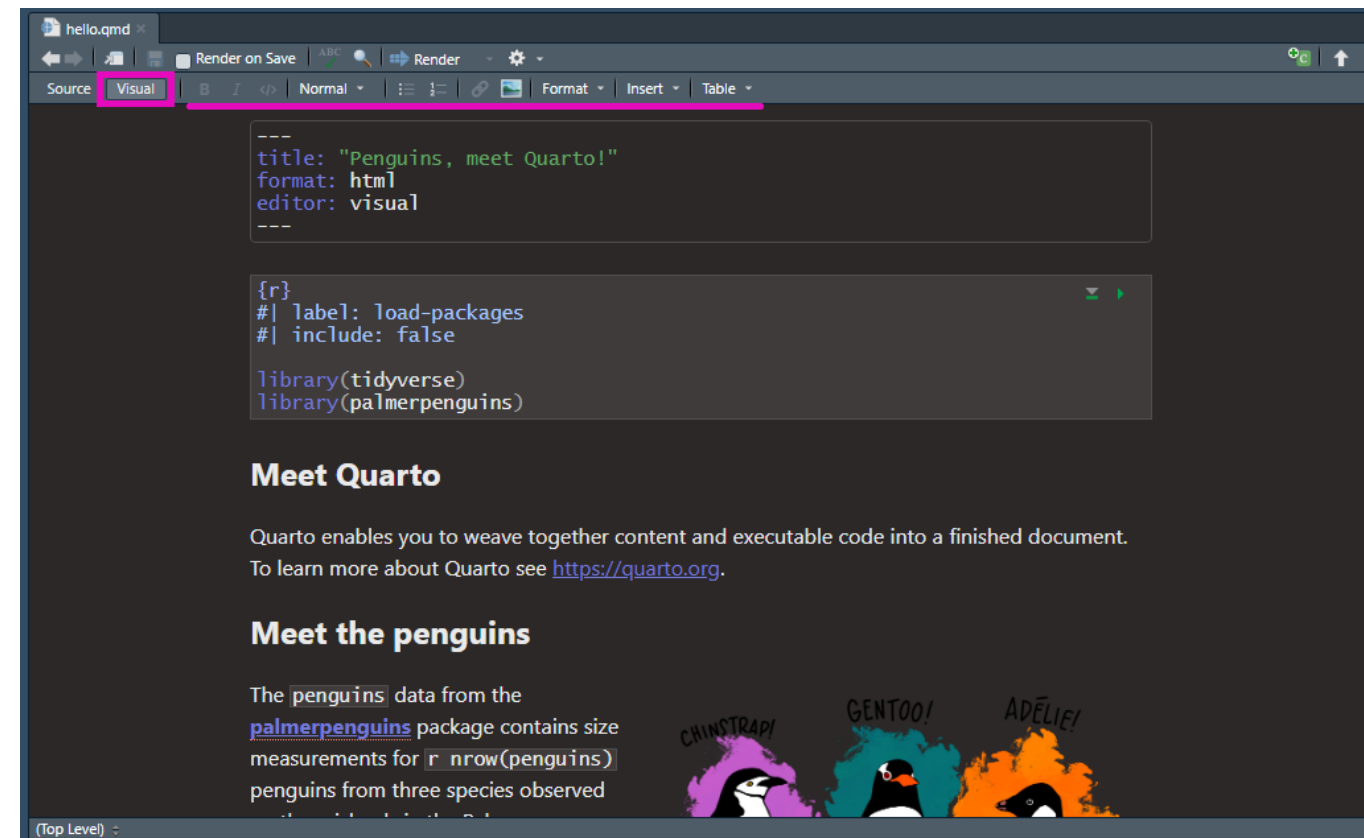

# Créer un notebook

Une fois l'installation faite, comment lancer Quarto?

RStudio

Jupyter

Deux modes: **Source** ou **Visual**, possible d'aller de l'un à l'autre à volonté

Que peut-on faire en Quarto ?

# Que peut-on faire en Quarto ?

- des rapports;
- des présentations;
- des sites web;
- des livres et articles.

Quarto rend possible de passer de l'un à l'autre sans (presque) aucune modification dans le code!

# Rapports

- HTML
- PDF
- Word

Quoi de plus que dans Rmarkdown (HTML) ?

# Rapport HTML : formats

- `margin` : Mettre des figures à côté (et non plus juste en dessous) du code

▼ Code

```
# Create data
data <- data.frame(
  x=LETTERS[1:26],
  y=abs(rnorm(26))
)

# Horizontal version
ggplot(data, aes(x=x, y=y)) +
  geom_segment( aes(x=x, xend=x, y=0, yend=y), color="skyblue") +
  geom_point( color="blue", size=4, alpha=0.6) +
  theme_light() +
  coord_flip() +
  theme(
    panel.grid.major.y = element_blank(),
    panel.border = element_blank(),
    axis.ticks.y = element_blank()
  )
)
```

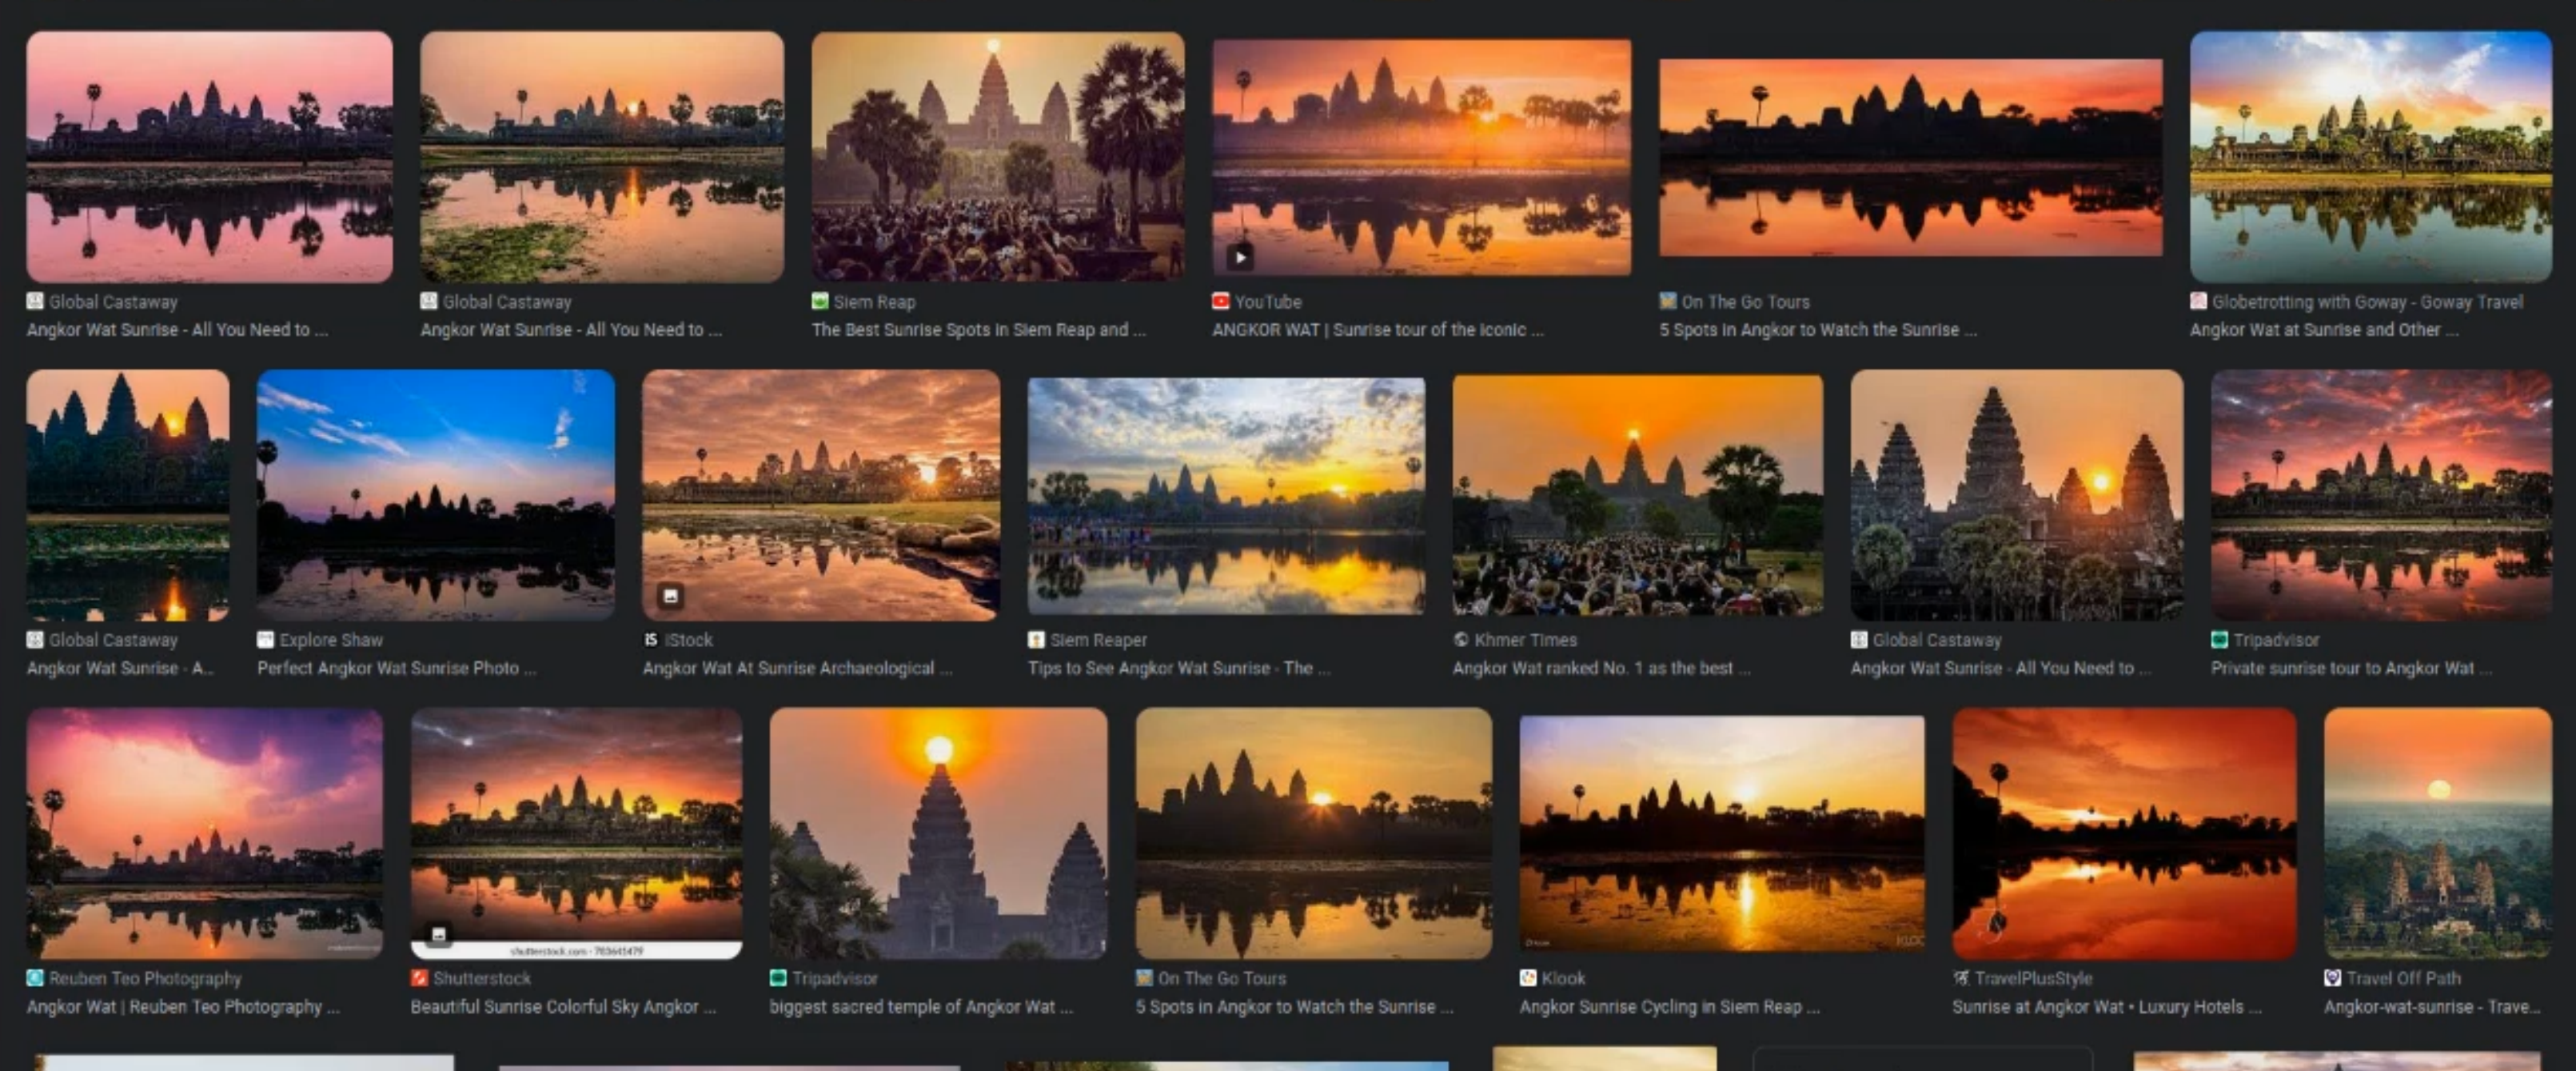

A lollipop plot!

- `columns` : arranger plus ou moins la place prise par l'objet en fonction du bloc

# Rapport HTML: le copier-coller

Possible de copier-coller une image (s'enregistre automatiquement dans un dossier `images`)

Vertical sidebar containing application icons: Firefox, Zoom, a blue circular icon, a document icon, a folder icon, a calendar icon, a terminal icon, a boat icon, and a letter 'R' in a blue circle.

# Rapport HTML: le copier-coller

Ainsi que du texte formaté (Quarto va conserver ce format).

# Rapport HTML : autres

Les trucs un peu gadget (mais quand même cool!) :

- Pouvoir afficher le rapport en mode clair ou sombre<sup>1</sup>.
- Le code: copier-coller, cacher/montrer, séparer automatiquement en plusieurs lignes
- Afficher les citations et notes de bas de page en passant la souris dessus
- `code-link` ou intégrer l'URL des pages d'aide des fonctions R<sup>2</sup>.

# Présentations

- Reveal.js
- Beamer
- Même possible d'exporter en `.ppt`

Quoi de plus que dans RMarkdown ?

# Présentation HTML : surligner le code

Faire apparaître au fur et à mesure le code pour pouvoir le commenter plus facilement

```
1 # Most basic bubble plot
2 data %>%
3   arrange(desc(pop)) %>%
4   mutate(country = factor(country, country)) %>%
5   ggplot(aes(x=gdpPercap, y=lifeExp, size=pop, fill=continent)) +
6     geom_point(alpha=0.5, shape=21, color="black") +
7     scale_size(range = c(.1, 24), name="Population (M)") +
8     scale_fill_viridis(discrete=TRUE, guide=FALSE, option="A") +
9     theme_ipsum() +
10    theme(legend.position="bottom") +
11    ylab("Life Expectancy") +
```

# Présentation HTML : chalkboard

- Un outil pour entourer, dessiner, écrire sur le slide
- Un tableau noir + craie avec possibilité d'intégrer les notes aux slides

Pour en savoir plus: [chalkboard](#)

# Présentation HTML : extension pointeur

```
$ quarto install extension quarto-ext/pointer
```

Raccourci = Touche **q** pour switcher entre le curseur et le pointeur.

# Blogs, sites webs

- Démo pour monter un site web en moins de 10 minutes: [rstudio::conf\(2022\) keynote by Mine Çetinkaya-Rundel & Julia Stewart Lowndes](#)

Pas possible ?! Ok, essayons de monter un site web...

1. Créer un compte [Quarto.pub](#)<sup>3</sup> et se connecter via le navigateur par défaut.
2. Faire le site et le publier.

### You're ready to publish!

You can use the `quarto publish` command to publish documents or websites to Quarto Pub.

Learn more at [Publishing to Quarto Pub.](#)

# Blogs, sites webs

- Nouvelle tab qui apparaît (“Build”) pour voir en avant-première le rendu du site (avant publication)
- Une seule ligne dans le terminal pour publier le site: `quarto publish`
- Possible de monter un site web à la fois avec des outputs R et Python (`.qmd` et `.ipynb`)

# Articles, books<sup>4</sup>

- On peut spécifier un format connu d'article scientifique (via CLI), i.e. ASS

Quarto est polyglote

# Quarto est polyglote

Quarto permet d'exécuter du code

- python,
- R
- Observable.hq
- Julia ...
- dans le **même notebook**
- en partageant les données

# les cellules de code

python

```
import pandas
pingouin = pandas.read_csv("penguins.csv")
# ojs_define( pypingouin = pingouin)
```

R

```
1 library(reticulate)
2 library(dplyr)
3 pingouin <- py$pingouin %>% mutate(bill_length_mm = 0.98 * bill_length_mm)
4 ojs_define( rpingouin = pingouin)
```

Observable.js

```
-1 ````{ojs}
0 //| echo: true
1 render(mySVG)
2 xProperty = 'flipper_length_mm'
3 yProperty = 'bill_length_mm'
4
5 function render(div) {
```

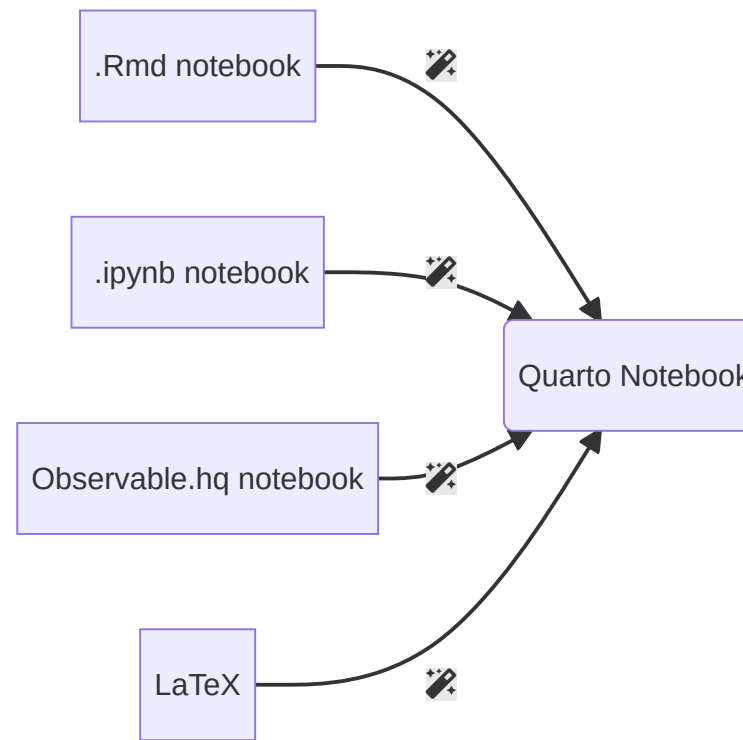

```
6 // draw on the SVG with D3
7 const selection = d3.select(div).select('svg');
8
9 const xExtent = d3.extent(rpinqouin, d => d[xProperty]);
```

❗ OJS Syntax Error (line 46, column 52)Unterminated template

# MIGRATION TO QUARTO

# ipy nb migration

- step 1 :

```
VSCoDe Command Palette
```

```
Jupyter: Import Jupyter Notebook
```

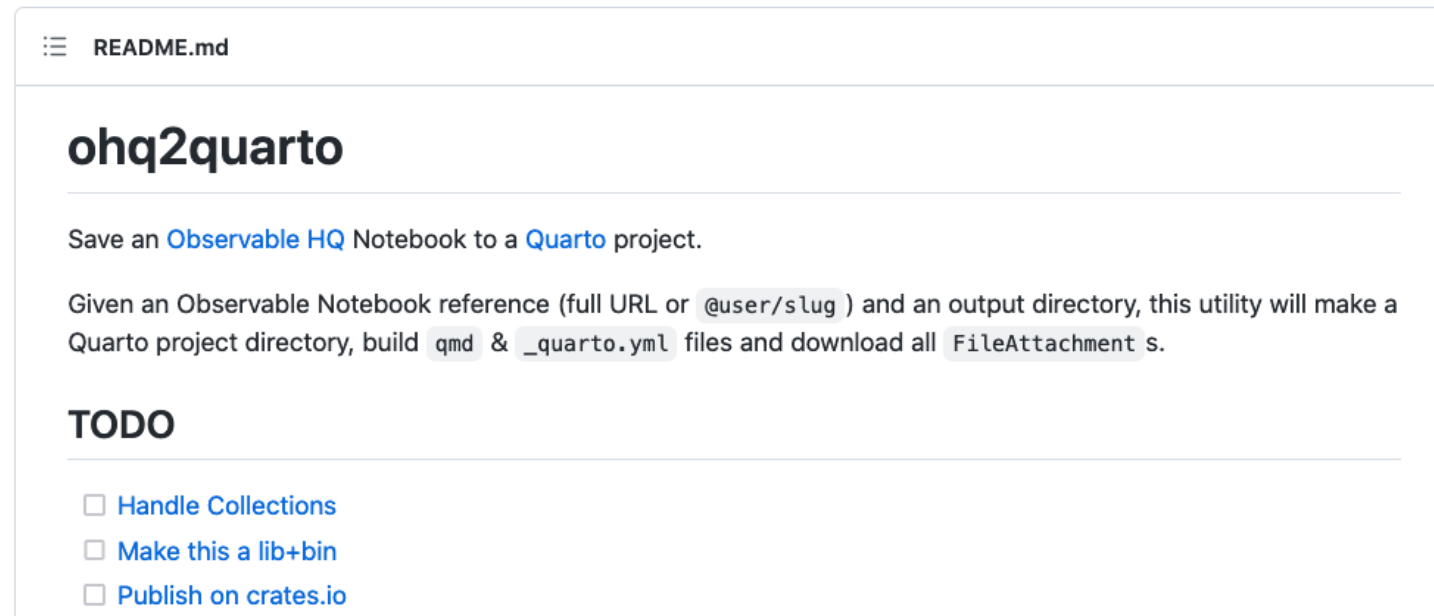

- step 2 :

```
VSCoDe Command Palette
```

```
Quarto: New document
```

# Observable.hq migration

- install ohq2quarto from github: [Save an Observable HQ Notebook to a Quarto project](#)

☰ README.md

## ohq2quarto

Save an [Observable HQ](#) Notebook to a [Quarto](#) project.

Given an Observable Notebook reference (full URL or `@user/slug`) and an output directory, this utility will make a Quarto project directory, build `qmd` & `_quarto.yml` files and download all `FileAttachment`s.

### TODO

- [Handle Collections](#)
- [Make this a lib+bin](#)
- [Publish on crates.io](#)

- step 1 : use the import command

Terminal

```
cargo run -- --ohq-ref @hrbrmstr/just-one-more-thing --output-dir ./example
```

# LaTeX migration

WiP

(more at the post-event bar)

# Et RMarkdown dans tout ça?

- Conversion `.Rmd` → `.qmd` simple et lecture de `.Rmd` via Quarto CLI possible
- Restera à moyen terme supporté par Posit...
- ...mais les efforts de développement/nouveautés seront concentrées sur Quarto

# Quarto Vs. RMarkdown: les plus

- La plupart des choses peuvent être également faites en Rmarkdown, mais bien plus simple/“élégant” en Quarto (moins de bidouillage peut être)
- Possible de switcher entre de l'édition en code et de l'édition en clique-bouton (type Word, LibreOffice), pratique quand on oublie juste une commande!
- Propositions automatique dans le YAML header (**CTRL + espace**) et pour les chunk options: pareil, pratique quand on a un trou de mémoire (ou qu'on veut savoir toutes les options disponibles)
- Intégrer avec du notebook R ou Python **exactement de la même manière**
- Facile de naviguer entre plusieurs formats (peu de choses à modifier pour que le document s'écrive)
- Gérer les outputs de différentes sortes dans un même document (comme un site web)

# Quarto Vs. RMarkdown: les moins

- Tout nouveau, donc peu d'aide dans la communauté disponible

**Merci !!**

Merci !
